Architecture Design Review Session for Dynamics 365 Finance and Supply Chain Management

Architecture Service | 1 - 5 Days | Remote or Onsite | Level 300 - Advanced

Description

During this engagement, you will learn to design the architecture for your solution and start to understand the design guidance and reference architectures that support your goals. We will examine in detail your business objectives and requirements and identify the optimal, desired-state architecture based on best practices.

NOTE: This requires a scoping call to ensure that the delivery aligns with the customer's needs.

Objectives

• Understand the current state and desired solution
• Define risks and tradeoffs for the solution
• Define and design the architecture for the prototype solution

Outcomes

• Create a prototype design for your solution architecture.
• You are prepared to deploy the prototype.

Methodology

Ramp up - Learn the key concepts and principles of solution architecture.
Design - Design an architecture for your solution that is based on best practices and reference architectures.

Prepare - Understand how to deploy the architecture and prepare to do so

Agenda

- Introduction
- Discovery and goals
- Solution architecture design session
- Create a prototype-ready architecture for your solution
